

PG Booking Platform - Project Handover

Project Type: Production-ready frontend UI/UX

Scope: Frontend only with dummy data

Design Direction: Luxury hotel-inspired PG booking experience

Next Page: Page 8 - Review Booking

Project Overview

PG Booking Platform is a premium frontend experience for browsing PG branches, viewing room details, selecting a specific bed, logging in as a guest, and entering booking information before review and payment. The product should feel elegant, trustworthy, minimal, and modern, inspired by Marriott, Hilton, Hyatt, Taj Hotels, Airbnb Luxe, and Booking.com Luxury Collection.

Core Rules

- Frontend only.
- Use dummy data only.
- Do not create backend, APIs, authentication logic, validation logic, database, JWT, payment integration, or business logic.
- Do not redesign previous pages.
- Do not change the design language, colors, typography, spacing, or component style.
- Create only the requested page when the user asks for a new page.
- Do not modify previous pages unless the user explicitly asks for that.
- Keep every page responsive for desktop, tablet, and mobile.
- Reuse existing components where practical.

Tech Stack

- React
- Vite
- Tailwind CSS
- React Router DOM
- Lucide React
- Framer Motion is listed in the requested stack, but it was not installed locally when Page 5 was created. Do not add dependencies unless explicitly approved.

Design System

Style

- Luxury hotel style.
- Minimal, elegant, premium, modern, professional, and trustworthy.
- Large white space.
- Rounded cards.
- Soft shadows.
- Elegant typography.

Colors

- Primary Background: #FFFFFF
- Primary Text: #1E1E24
- Accent: #D4AF37
- Secondary Text: #555555
- Border: #E5E5E5
- Light Background: #F8F8F8
- Success: #2E7D32
- Warning: #F9A825
- Danger: #C62828
- Selected Bed Blue: #2563EB

UI Rules

- Cards should use about 18px radius.
- Login card used 20px radius.
- Buttons should feel premium, rounded, and have smooth hover states.
- Inputs should have comfortable height and gold focus border/ring.
- Use Lucide icons.
- Prefer real imagery for luxury pages.

Reusable Components

- **Button:** `src/components/ui/Button.jsx`. Variants include primary, secondary, ghost, and danger.
- **Card:** `src/components/ui/Card.jsx`. Uses rounded 18px cards,

border, soft shadow, and hover lift.

- **Input:** `src/components/ui/Input.jsx`. Uses gold focus border/ring and comfortable height.
- **PublicLayout:** `src/components/layout/PublicLayout.jsx`. Contains the existing sticky luxury navbar.

Important Implementation Note

Several newly created pages are standalone components and are not wired into routes, because the user repeatedly instructed not to modify previous pages or existing files. Do not assume these files are routed. Only connect them if the user explicitly asks.

Completed Pages

Page 1 - Landing Page

Existing file: `src/pages/guest/Home.jsx`

- Luxury PG landing page.
- Includes hero, featured PGs, popular branches, amenities, testimonials, FAQ, and footer.
- Uses premium imagery, gold accent, white background, rounded cards, luxury shadow, and responsive layout.

Page 2 - Branch Listing

Created file: `src/pages/guest/BranchListingPage2.jsx`

- Allows users to browse all PG branches and find suitable accommodation.
- Includes luxury navbar, hero search, filter sidebar, top bar, branch grid/list cards, empty state, loading skeleton, and footer.
- Filter sidebar includes location, gender, room type, sharing type, price range, available beds, amenities, reset, and apply controls.
- Branch cards include image, name, location, rating, beds, rent, description, amenity icons, view details, and wishlist button.

- Uses dummy data only and no API calls.
- Existing `BranchListing.jsx` was not modified.

Page 3 - Branch Details

- Marked as completed in the user handover.
- Original prompt details are not visible in this conversation.
- Do not redesign or alter it unless explicitly requested.
- Expected to follow the same luxury branch detail design pattern with gallery, overview, amenities, rooms, location, and CTA sections.

Page 4 - Room Details

Created file: `src/pages/guest/RoomDetailsPage4.jsx`

- Provides full information about a selected room before bed selection.
- Includes navbar, breadcrumb, image gallery, room info, pricing card, amenities, bed summary, house rules, reviews, sticky booking card, related rooms, and footer.
- Gallery includes hero image, thumbnails, previous/next buttons, counter, and view all photos button.
- Pricing includes rent, deposit, maintenance, electricity, food, available date, and move-in date UI.
- Uses dummy data only and no API calls.
- Existing `RoomDetails.jsx` was not modified.

Page 5 - Bed Selection

Created file: `src/pages/guest/BedSelectionPage5.jsx`

- Lets users visually choose a specific bed before booking.
- Experience is inspired by train seat booking, flight seat selection, and premium hotel room selection.
- Includes navbar, breadcrumb, room summary, legend, interactive bed layout, selected bed panel, booking summary, sticky sidebar, empty state, loading skeleton, and footer.
- Bed statuses: available green, booked red, reserved orange, selected blue.

- Only available beds are clickable. One selected bed at a time.
- Booked and reserved beds are disabled.
- Includes keyboard focus states and tooltip text.
- Uses dummy data only and no API calls.
- Existing `BedSelection.jsx` was not modified.

Page 6 - Guest Login

Created file: `src/pages/guest/GuestLoginPage6.jsx`

- Premium guest login experience.
- Includes luxury navbar, two-column layout, welcome illustration, highlights, login card, why-login card, security card, help section, and footer.
- Login options include Google button, Facebook button, divider, and disabled mobile number UI marked Coming Soon.
- No authentication logic and no API calls.
- Existing `Login.jsx` was not modified.

Page 7 - Booking Form

Created file: `src/pages/guest/BookingFormPage7.jsx`

- Premium booking form for guest personal details before payment.
- Includes navbar, breadcrumb, page header, guest form, sticky booking summary, promo card, terms checkboxes, bottom actions, help card, and footer.
- Form sections: personal information, move-in information, emergency contact, and identity verification upload cards.
- Upload cards are visual only.
- No validation logic, submit logic, business logic, or API calls.
- Existing `Booking.jsx` was not modified.

Focused Verification Already Run

A focused esbuild bundle check was run for each standalone page, with output written to `/tmp` instead of project source. All checks passed.

- `BranchListingPage2.jsx`
- `RoomDetailsPage4.jsx`
- `BedSelectionPage5.jsx`
- `GuestLoginPage6.jsx`
- `BookingFormPage7.jsx`

Future Work Guidance

- Wait for explicit user instruction before creating Page 8.
- The next expected page is Page 8 - Review Booking.
- Create only the requested page.
- Prefer a new standalone file if the user says not to modify previous pages.
- Do not wire routes unless explicitly requested.
- Use dummy data.
- Use existing Button, Card, and Input components where practical.
- Use Lucide icons.
- Use local UI state only for interactions such as tabs, selected item, gallery, or toggles.
- Do not import API services, sockets, auth context, or navigation business flows in dummy UI pages.
- Do not add dependencies unless the user explicitly permits package modification.
- Run a focused bundle check after creating a page.
- Stop after completing the requested page and wait for approval for the next page.
